

Corporate Fact Sheet

Vestagen Technical Textiles, LLC, manufactures and markets Vestex™, the first in a new class of Nano-technology based high performance personal protective apparel. Vestex is made with a proprietary blend of three textile technologies bonded to a single layer of fabric. Engineered for the tasks medical professionals perform and the conditions they encounter, Vestex scrubs, lab coats and isolation gowns repel dangerous fluids, resist stains, wick away perspiration and contain an antimicrobial to prevent degradation of the fabric from microorganisms and control odors. Fluids literally bead up and roll off the garments even as the fabric remains breathable and comfortable. Vestex keeps healthcare workers clean, cool and dry throughout the longest shifts.

Vestagen is led by a skilled management team with over 50 years of combined experience, and a commitment to creating innovative textile solutions.

Location

Vestagen is headquartered in Orlando, Florida.
